

The American Institute of Architects
Continuing Education System
AIA/CES Registered Provider Program Summary Handout

Provider: Stanley Access Technologies, a
Division of Stanley Security Solutions

Length: 1.5 Hours

Program #: 00SAT1

Credits: 1.5 Hours

Program: Automatic Entrance Systems Overview

HSW: Yes

Description: An overview of automatic door systems typically designed, specified, and installed in commercial and industrial applications; with a primary focus on the most common applications with swinging and sliding doors.

Learning Objectives: By the end of the program the attendee should have a basic understanding of: the function of automatic door systems and components including activation and safety systems; layout requirements for swinging and sliding automatic doors; and, code requirements for accessibility, egress, and safety.

How Taught: The CES facilitator utilizes a PowerPoint presentation to provide an in-depth overview of the function, layout, and safety requirements for automatic doors.

A/V Needed: Electrical power and a screen for the presentation. The CES facilitator will provide the necessary laptop computer and will coordinate with the on-site

professional development administrator to make provisions for projection equipment.

Target Audience: Architects, Engineers, specifiers, owners, and other design professionals serving the commercial and industrial market. The recommended audience size is between 5 and 50 professionals. The program is suitable for professionals of varying experience level and includes a question and answer period at the end of the program.

Facilitator Qualifications: All Stanley Access Technologies Regional Managers have been trained on CES guidelines and presentation skills. Additionally, they are certified by the American Association of Automatic Door Manufacturers (AAADM) as experts in the application and safety of automatic door systems.

Costs: This program is offered at no cost and is intended to promote awareness of automatic door systems and safety.
